APRIA 2014, Moscow, Russia July 28, 2014

Developing Issues in Insurance Regulation Globally

W. Jean Kwon, Ph.D., CPCU
E.A.G. Manton Chair Professor in International Insurance and Risk Management
Director, the Center for the Study of Insurance Regulation
School of Risk Management
St. John's University

KwonW@stjohns.edu http://facpub.stjohns.edu/~kwonw/

Presentation Points

Key developments (capital and risk management)

- IAIS Insurance Core Principles
- Solvency II
- RBC
- Own Risk and Solvency Assessment
- Regulatory authority structures
- Insurance data collection and dissemination
 - National and market levels
- Concluding remarks

(Enterprise/ORSA) Risk Management

Capital Requirements and

Insurance Core Principles (ICPs), including:

- ICP 3 (Information Exchange)
 - Multilateral Memorandum of Understanding (MMoU)
 - Bilateral Memoranda of Understanding (MoU)
 - Supervisory colleges
- ICP 9 & 16 (Supervisory Review/Reporting; ERM)
 - Risk-based approach to supervision, covering:
 - Financial statements
 - Data collection and dissemination
 - Market analyses, internal models, insurers' own risk and solvency assessments (ORSA)
 - Enterprise risk management

IAIS Initiatives

ICP (continued)

- ICP 14 & 15 (Valuation and Investment)
 - Substantial consistency in valuation methodology desirable, thus needing financial reporting standards
 - International Financial Reporting Standards (IFRS)
 - International Accounting Standards Board (IASB)
 - Stress and scenario testing
- ICP 20 (Public Disclosure)
 - Disclosure of relevant, comprehensive and adequate information timely
 - Information presented in any generally accepted national and international standards and practices so as to aid comparisons between insurers

IAIS Capital Requirements

- Global Systemically Important Insurers (G-SIIs)
 - Two requirements
 - Basic Capital Requirements (BCR) by November 2014
 - Requirement for Higher Loss Absorption (HLA) by yearend 2015
 - Application to G-SIIs from 2019

Pillar 1

- Adequate financial resources to meet all liabilities
- Solvency Capital Requirement (SCR) covering 12 months with a 99.5% probability
- Minimum Capital Requirement (MCR) as a floor to cover risks

Pillar 2

- Governance and risk management framework \rightarrow ORSA for 3-5 years
- Measurement of risks against which capital must be held
- Pillar 3
 - Disclosure, reporting and transparency requirements regarding capital and risks

Risk-Based Capital (RBC)

• The minimum capital to support the insurer's overall business operations in consideration of its size and risk profile

NAIC Solvency Modernization Initiative (SMI)

- In response to ORSA developments but relatively non-descriptive
- Focused on capital requirements, governance and risk management, group supervision, statutory accounting and financial reporting and reinsurance
- Insurers required to conduct it from 2015
 - Insurers (annual direct written premiums > \$500M)
 - Groups (annual direct written & assumed premiums > \$1B)

Own Risk and Solvency Assessment (ORSA)

- Promoted by the IAIS and likely accepted globally
- Insurer's own assessment of its current and future risks through an internal process, demonstrating its ability to withstand financial stress.
- Variations in approaches and application

Regulatory Authorities

Structural Differences I

Government agency

- Commonly as part of Finance/Commerce Ministry
- For example: Belgium (Office de Contrôle des Assurances), Argentina (Superintendencia de Seguros de la Nacion) and Nepal (Insurance Board)

Quasi-government agency

- Quasi-independent and not part of a Ministry
- For example: India (Insurance Regulatory and Development Authority)

Structural Differences II

Single agency for the entire financial services sector

• For example: UK (previously, Financial Services Authority) and Japan (Financial Services Agency)

Single agency for selected industries

• For example: Australia (Prudential Regulatory Authority) and Peru (Superintendencia de Banca y Seguros)

Central bank as regulator/supervisor

• For example: monetary authorities

Twin peaks

- Separation of prudential concerns from financial examination and market conduct regulation
- Frequently the central bank as a prudential body but exceptions exist
 - For example: UK (now, Financial Conducts Authority (FCA) and Prudential Regulation Authority (PRA))

Kwon (2013)

- A negative impact of the single agency structure
- A positive impact of regulation by two or more agencies in the life insurance market

Insurance Data Issues

Insurance Data/Statistics Issues I

Scope and quality of data

- Collection cost incurred by the regulator
- Compliance cost incurred by the regulated

Dissemination

- Raw data vs. summary data
- Hardcopy vs. online
- Consistency across countries

Insurance Data/Statistics Issues II

Timeliness in data collection

Scope and quality of data

- Collection cost incurred by the regulator
- Compliance cost incurred by the regulated

Dissemination

- Raw data vs. summary data
- Hardcopy vs. online
- Consistency across countries

Public Data Accuracy: Asian Countries

Number of Licensed Insurance Companies

• The findings are preliminary and subject to minor counting error. AXCO does not directly collect this information.

Bangladesh (The life insurance data by AXCO includes three takaful companies.); Brunei (All composite insurers reported by AXCO are takaful companies.); Japan (The 27 companies by AXCO include 18 foreign branches and 3 insurance holding companies. AXCO also reports that there are 59 co-operative insurance carriers and 64 "short-term small-amount (SSI)" insurance carriers.); Malaysia (The reinsurance data by AXCO quotes that eight for life insurance includes two health insurers. It also quotes two life and three nonlife takaful insurance companies.); and Taiwan (The number for nonlife includes one co-operative company.)

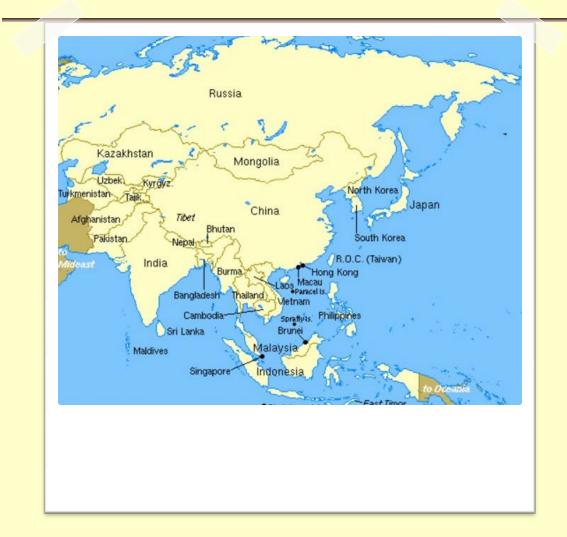

Of the 969 companies it reports, the Fitch rating information is provided for 532 companies (or 54.9% of the sample).

Data Collected from the Private Sector

2011 OECD Survey:

19 Asian Countries

Based on W. Jean Kwon (2012), OECD Asia Regional Expert Seminar in Bangkok, Thailand

2013 OECD Survey:

16 ASSAL Member Countries

Based on OECD (2013) at Latin American Seminar on Insurance Statistics, Montevideo, Uruguay

Key Findings

- Key findings for improvement
 - Timeliness
 - Accuracy
 - Data Collection efficiency
 - Standardization
 - Regional/Global coordination

- Suggestions
 - Accounting principle and codification
 - Data scope, insurer compliance, and quality control
 - Technical and IT support

OECD Global Insurance Statistics (GIS)

- Being expanded to include non-OECD countries
 - Hong Kong, Indonesia, Malaysia, Singapore
 - South Africa
 - Brazil, Columbia, Costa Rica, Cuba, El Salvador, Guatemala, Nicaragua, Panama, Peru, Uruguay
- To be revised for more variables
- A new round of survey in 2014
 - Also to examine and understanding key statistical and financial methodologies governments use for insurance regulation/supervision
 - Expected to be available yearend 2014

Concluding Remarks

Concluding Remarks

More layers of regulation

- Vertical (FIO vs. NAIC/states in the US)
- Horizontal (intergovernmental and regional agencies)
 - IAIS, EIPOA, OECD, IMF, World Bank...
 - ASEAN for regional market initiatives in 2015
 - Asociación de Supervisores de Seguros de América (ASSAL)
- Capital and risk management regulation
 - Government-imposed and self-regulation

Insurance data/statistics

Codification and standardization

Thank You!
